Appexil CMS

Consultancy Management System - User Guide

This guide explains how to use the Appexil CMS software in daily office work. No technical knowledge is needed - if you can use WhatsApp and a browser, you can use this software.

1. Opening the software

Open the Appexil CMS link given to you (by Ranks Crafter) in Chrome on your mobile or computer. We recommend saving it as a bookmark or adding it to your home screen for one-tap access.

If an app PIN was set in Settings, enter the PIN to unlock.

2. Home (Dashboard)

The home screen shows your business numbers at a glance:

- Total Revenue - money received from paid invoices (AUD amounts are converted to PKR using the rate in Settings).
- Total Expenses - all office expenses recorded.
- Net Profit - Revenue minus Expenses. This is your real profit.
- Unpaid amounts - how much clients still owe, in PKR and AUD.

3. Clients

Adding a new client

1. Tap Clients in the bottom menu, then the + Add Client button.
2. Fill the form: full name, CNIC or passport number, phone number WITH country code (example: +92 300 1234567), email, and service type (example: CDR Writing - Engineers Australia).
3. Choose the status (New Lead, Signed Up, Documents Pending, In Progress, Assessment Lodged, Completed) and tap Add Client.

Every client automatically gets an ID like APP-2026-001. Use the search box to find clients by name, ID, CNIC or phone.

Client profile

Tap any client to open their profile. From here you can: edit details, create an invoice for them, generate their service agreement, or send them a WhatsApp message.

4. Invoices & Payments

Creating an invoice

1. Go to Invoices, tap + New Invoice.
2. Select the client, enter the amount, choose the currency (PKR or AUD) and the payment type (Installment 1, Installment 2, or Full Payment).
3. Tap Create Invoice. The invoice appears in the list as Unpaid.

Invoice PDF (with bank details)

Open any invoice and tap Download PDF. The PDF automatically includes the correct bank details: Allied Bank details for PKR invoices, Meezan Bank (Shoaib Akram) details for AUD invoices. Send this PDF to the client.

Recording a payment

When the client pays, open their invoice and tap Mark as Paid. The payment date is recorded. IMPORTANT: only Paid invoices are counted in your revenue and profit - Unpaid invoices are never included.

5. Expenses

Go to Expenses and add every office cost: title (example: FBR Tax Filing), amount in PKR, date and category (Tax, Office, Marketing, Travel, Software, Staff, Other). All expenses reduce the Net Profit on the dashboard.

6. Service Agreement (auto-generated)

1. Open the client profile and tap Generate Agreement.
2. A form shows the payment amounts (default Total 400 AUD, 1st instalment 200 AUD, 2nd instalment 200 AUD). Change them if this client agreed on different amounts.
3. Tap Generate Agreement PDF. The file downloads as Agreement_[ClientName].pdf, with the client name, CNIC, date and your edited amounts filled in automatically.
4. Take a print for signature, or send the PDF to the client on WhatsApp and ask for a signed scanned copy by email.

You can change the default fee amounts anytime in Settings (gear icon, top right).

7. Sending via WhatsApp

On the client profile, tap Send via WhatsApp. It opens WhatsApp chat with that client and a ready message. Attach the invoice or agreement PDF file manually before sending.

8. Settings (one-time setup)

Tap the gear icon (top right). Set these once:

- AUD to PKR rate - update this whenever the exchange rate changes, so profit stays accurate.
- Bank details - enter your real Allied Bank (PKR) and Meezan Bank (AUD) account details. These print on every invoice PDF.
- Default agreement fees - the amounts pre-filled in the agreement form.
- App PIN (optional) - set a 4-digit PIN to lock the software.

9. Daily routine (2 minutes)

- New client signs up -> add them in Clients.
- Invoice a client -> create invoice, download PDF, send on WhatsApp.
- Client pays -> open invoice -> Mark as Paid.
- Any office spending -> add in Expenses.

- Check Home for today's profit.

10. Data safety

All data is stored securely in the system database. Do not share your link or PIN with outsiders. For extra safety, download important invoice/agreement PDFs and keep a copy.
